# RPT62-EVK001 Application Note

This document provides measurement test report of the RPT62-EVK001 board, which includes electrical characteristics, EMC noise and thermal measurement results. The RPT62-EVK001 is a power tree solution reference board developed for infotainment devices such as automotive clusters, center information displays, and ADAS ECUs. The power system that can support functional safety is integrated on a single board, realizing an optimal configuration as a power tree. It has good EMC performance that meets CISPR25 Class 5 test standard even when all power supplies are operating. Heat dissipation of each device is reduced by distributing high-efficiency DCDC. In addition, two voltage monitoring ICs with self-diagnosis functions can monitor the output of all systems, which contributes to a higher level of functional safety.
